List of changes:

- Added the new need services in the service layer to user,board and task services.

-Added an owner, id fields and usersList to all of the board classes and the collumn class.

-Added a asignee field to the task classes.

-Added a design for the tables in the data base.

-Added an id generator field to userFacade - generates IDs for boards.

-Added a DTO pointer fields for the correct classes in the DAL.

-Constructed the data access layer with the need DAL objects and controllers.

Corroections to improve cupling and cohesion:

-CreateBoard moved from userFacade to boardFacade

-UserBL does not hold a list of boards,instead a registry is created for each user in the boardFacade dict.

-Redadent fields of userFacade were removed from task and board services

-Static consts were add to avoid magic numbers

More changes will be made throughout the implementation
